

Dear Atari Computer User,

Thank you for selecting the APE-FACE XLP for your printer interface needs. The APE-FACE XLP is used to connect any parallel printer with your Atari 400/800 or 600XL/800XL computer. In an effort to expedite delivery of the APE-FACE, we have shipped without final packaging and documentation.

You should, however, find the APE-FACE very easy to install and use. Simply plug the flat ribbon cable into the Centronics connector on the back of your parallel printer. Then, plug the longer round cable into your Atari serial peripheral port. Please note the XLP is an end of daisy chain peripheral. Use the last available serial port connector (usually on the disk drive). That's it! You're ready to start printing.

You should have years of trouble free use with your new interface. Please return the warranty information card as soon as possible and save your purchase receipt. The warranty period for defects in material and workmanship is one year from the date of purchase. But in case of trouble, please contact your dealer.

Thank you and happy hardcopies!
